KEYWORDS

cognitive impairment, peak alpha frequency, power spectral density, Parkinson's disease, EEG

A Correction on

Peak alpha frequency and alpha power spectral density as vulnerability markers of cognitive impairment in Parkinson's disease: an exploratory EEG study

by Zhao, Y., Cai, J., Song, J., Shi, H., Kong, W., Li, X., Wei, W., and Xue, X. (2025). *Front. Neurosci.* 19:1575815. doi: 10.3389/fnins.2025.1575815

In the **Abstract**, the word “positively” was erroneously included in the **Results** section. This sentence has been corrected to read:

PDCOG showed lower alpha PSD in parieto-occipital/posterior temporal regions (P3, P4, O1, T5, T6, PZ) vs. PDNC ($p < 0.05$), with these regions correlating with MoCA scores. The original version of this article has been updated.
