KEYWORDS

pulmonary valve stenosis, necrotizing enterocolitis, metagenomic next-generation sequencing, anticoagulation, case report

A Correction on
Necrotizing enterocolitis in a neonate with severe congenital pulmonary valve stenosis complicated by a postoperative right atrial thrombus: a case report

By Zhang W, Zhang L and Liu H (2025). Front. Pediatr. 13:1594899. doi: 10.3389/fped.2025.1594899

Text correction

Adding/removing text

In Case presentation section, Page 2, line 121–122 "The preoperative cardiac ultrasound was normal and is shown in Figure 1A". The cardiac ultrasound shows severe pulmonary valve was stenosis rather than normal.

A correction has been made to the section Case presentation section, Page 1, line 111–112.

"After 1–2 days, she developed dyspnea, abdominal distension, and oliguria, and was then transferred to a different hospital. The preoperative cardiac ultrasound revealed severe pulmonary valve stenosis (Figure 1A). Subsequently, due to…"
